Safety Research Institute for Chemical Compounds Co., Ltd. was established in 1970 for the purpose of conducting safety researches of pharmaceutical products, by a team of medical scientists of Hokkaido University entrusted with a mission to overcome echinococcosis, an endemic disease in Hokkaido. As a contract research laboratory, we have engaged in non-clinical contract researches of chemical substances and pharmaceuticals with a consistent theme of “Comprehensive Safety Evaluation” in accordance with our corporate principle, “high degree of extrapolation to the human.”

Along with the full range of non-clinical safety studies and pharmacological research in compliance with GLPs for pharmaceuticals, agricultural chemicals, chemical substances, and medical devices, we have also provided CRO (Contract Research Organization) services in the clinical trial phase of the drug development process since 2001.

Through implementation of safety studies of pharmaceuticals and chemical substances, and through the support of clinical research for drug development, we will predict and prevent side effects and environmental destruction, a so-called backlash against scientific development. We would like to make a positive contribution to society by assuming a role of supporting development of superior new drugs.

Corporate Overview

Address : High Tech Hill Shin-ei, 363-24, Shin-ei, Kiyota-ku, Sapporo, Hokkaido 0040839 Japan
Company Representative : Masao Matsuura, president
URL : http://www.ka-anken.co.jp
Foundation : September, 1970
Capital : 250,400,000 Yen
Employees : 89
Category of Business : Contract research organization
Business Overview : Contract safety research, pharmacological test and human clinical trials of pharmaceuticals, agrichemical, chemical substances, cosmetics, medical appliance, food additives, health food, animal drug, and feeding stuff additives
Contact : Daisaku Sakai, Planning Section
E-mail : sakai-daisaku@ka-anken.co.jp
