With the theme "Contribute to the community through the support of customers' health", SUPPLE ART CO., LTD was founded as a supplement manufacturer in October 2003 in Sapporo. We widely expanded our private brand products at major drug stores around the country. We are also tied with business partners for planning of OEM.

With thorough management of schedules from planning to commercialization, quick decisions and with the appropriate behavior, we respond to customer needs without taking the opportunity of taking advantages of small companies.

During the health food boom of 2006, we were able to get products such as "α-lipoic acid" and "Coenzyme Q-10" to the national market faster than any other company. One of our company’s features is the development of trend-conscious products and we produced resveratrol (red grape low molecular polyphenol) that is said to be associated with long life, vegetable glucosamine for those who suffer from shellfish allergies and black turmeric that is said to be the 4th turmeric earlier than other companies.

We, as a local company in Hokkaido, plan to provide health foods, using local materials, for people around the country. We also plan to collaborate with health food companies in Hokkaido to develop products, aiming at having all these made in Hokkaido from raw materials to production, to make Hokkaido more appealing.

**Major Product Lines**: General dietary supplement (turmeric, lutein, glucosamine, resveratrol, etc.)
