Nippon Beet Sugar MFG. Co., Ltd.

Corporate Profile

Nippon Beet Sugar Mfg. Co., Ltd. was founded in 1919 with the aim of establishing a self-sufficient domestic sugar supply system and promoting the development of Hokkaido. Since then, in line with our corporate philosophy of contributing to society with a pioneering spirit, we have committed ourselves to the securement of sweetening resources in Japan and the promotion of cold-region agriculture in Hokkaido.

Our society is currently in a major period of transition, and in response to this we promote the effective use not only of sugar but also of other components contained in the roots of the beet plant as well as developed food materials that contribute to the improvement of lifestyle habits. These include raffinose (an oligosaccharide known to be highly effective in intestinal regulation), betaine (an amino-acid compound used as a food additive or a moisturizing agent) and beet fiber (a type of dietary fiber). As a cutting-edge organization in today’s world, we remain committed to our efforts to contribute to society and become a trusted company that involves itself in the community.
