Development of scientific technology started from industrial revolution in 19 century surely provide we human being a prosperous life environment and result of longevity, while brought us an other aspects of social anxiety and gradual destruction of earth environment. To overcome these new challenges like greenhouse effect, lack of natural resources, rapid increase of population, and unexpected epidemic, support the permanent progress of overall human society, and continuous creation of the future it is evident to develop scientific technology. Since establishment, we have been proud of our contribution to the scientific technology in Japan as a considerate and active sales team with technical competence.

Although we entered into 21st century with various global concerns, we Hayasaka people respectively propose customers high quality products and systems with superior technical competence and aspiration while evolving consulting sales and contribute to the development of scientific technology under a philosophy of “considerate and active sales team always producing optimum ‘measurement technology’”
