Hokkaido Coca-Cola Bottling Co., Ltd. hopes to grow with “northern land, Hokkaido” and accomplish responsibility as a company from Hokkaido, aiming at being an elected company.

Roles we have to accomplish are to conduct wide environmental friendly activities for valuable “water” and business activities to contribute more to the development of Hokkaido.

We preserve water sources (groundwater) to keep high water quality as well as adopt the “Lagoon treatment system”, which uses a self-purifying cycle by native microbes so as to turn factory wastewater into a no waste sludge when released. We obtained ISO 9001 and 2000 in February 2007, and also ISO 14001 in February 2009 for production, sales and management departments and made group-wide efforts to enhance management quality.

We continue to conduct environmental friendly activities as a part of corporate activity to achieve a “sustainable society” with Hokkaido citizens.

**Major Product Lines**: Coca-Cola, Georgia, Aquarius, Sokenbicha, Fanta, Coca-Cola zero and other beverages
