In April, 2002, we were established as a venture company founded by the graduate school of medicine and the faculty and graduate school of engineering of Hokkaido University. We are working on the remote diagnostic image support service based on innovative diagnostic technology of Hokkaido University (to support local healthcare) and development of high-precision imaging system.

Remote diagnostic image support receives CT and MRI images from local hospitals to support the diagnostic work, and currently we are providing services to 62 hospitals in Hokkaido.
