Yamachu Co., Ltd.

Corporate Profile

Yamachu (Yamamoto Tadanobu Stores, Inc.), founded in 1953, and incorporated in 1960, supplies legumes produced in Tokachi, Hokkaido throughout the country. In particular, we carry out day-to-day activities in order to connect the chief legume-producing area, Tokachi, with consumers and play a part in the development of Tokachi agriculture.

From the viewpoint that “agriculture is a communication industry,” we have been providing commercial farms with information such as which food manufacturers use their produce and in which form their produce reaches consumers, functioning as “reverse traceability” since old times. We also think that it is a role for Yamachu to develop a sense of producer responsibility.

Currently, we actively work to expand consumption of soybeans produced in Hokkaido. General soybeans have been collected and shipped for processing into products such as miso (soybean paste) and soy sauce. For further diversification of soybeans produced in Hokkaido, our company has made full use of proprietary technologies for processing suitability, varietal characteristics and cultivation methods, and has conducted research and development of a soybean with a high percentage of zinc—2.5 times that of the ordinary soybeans. Zinc soybeans are gifts from the earth, which help alleviate modern diseases caused by mineral shortages, such as taste disorders and weakened immune systems.

Yamachu considers the development of high-value-added raw materials as its mission and keeps evolving.

Corporate Overview

Address : 3, Nishidori 7-chome, Kino, Otofuke-cho, Kato-gun, Hokkaido, Japan
Company Representative : Hideaki Yamamoto, president
Phone : +81-155-31-1168 Fax : +81-155-31-5901
URL : http://www.yamachu-tokachi.co.jp
Foundation : 1960
Capital : 20,000,000 Yen
Employees : 58
